Seedling quantities are limited and all sales are based on a first come first serve basis. The MCCD cannot guarantee the survival of plant material after pickup. The MCCD also reserves the right to substitute for a similar variety, should it be necessary.

ORDERS MUST BE PICKED UP BETWEEN 9:00AM – 4:00PM at the MCCD OFFICE!

IF YOU CANNOT PICK UP YOUR TREES ON TIME, PLEASE CALL TO MAKE OTHER ARRANGEMENTS. THE DISTRICT WILL NOT BE RESPONSIBLE FOR ORDERS LEFT BEYOND THOSE TIMES. NO REFUNDS WILL BE MADE ON ORDERS NOT PICKED UP!

EASTERN WHITE PINE:

Soft, light green blue needles, tolerates dry, rocky soil as well as wet, swampy areas. Excellent ornamental for windbreaks, Christmas trees, small properties. Fast grower. Good for naturalizing and windbreaks.

BUR OAK:

Growth to 75 feet with equal or slightly greater spread. Valued as a timber producer. Will make satisfactory growth on poor, dry, clay soils. Its resistance to smoke and gas injury further increases its value as an ornamental.

RED SPRUCE:

Also known as Yellow Spruce. Red Spruce grows at a slow to moderate rate to a height of 60 to 80 feet. Spread 20 to 25 feet. It has a narrow, conical shaped crown. The needles are yellow green in color, shiny and tend to curve upward. The wood is soft, light, has narrow rings and has a faint reddish tinge. Red Spruce is suitable for Christmas trees. This conifer prefers moist but well drained, sandy loam. Native to North America. The buds and seeds provide food for grouse, red squirrels, pileated woodpeckers and crossbills.

HYBRID POPLAR:

Extremely fast growth to 80 feet. Crown spreads to 30 feet. Should grow 4 to 8 feet per year. Does not compete well with weeds and grasses. Planting site should be kept mowed and weed free. Plant 50 feet away from drains and sewers.

WINTERBERRY HOLLY:

Height and spread 6 to 12 feet. Deciduous. Female plants produce bright red berries. Likes acidic soil, will tolerate wet, swampy conditions. As these plants are grown from seed, we cannot distinguish between male and female plants. Therefore, plant at least 5 to ensure pollination.

WHITE FLOWERING DOGWOOD:

Grows to 40 feet. Dense lustrous, green foliage. Bright red berries are food for birds. Does best in rich, moist soil, but is known to grow well in average well drained soil. The White Flowering Dogwood is considered to be the best ornamental of all trees.

GRAY DOGWOOD:

Fast growing to 15 feet. Very dense green foliage that turns purplish in fall. Numerous small white flower clusters, bloom in mid June, giving way to small white berries. Grows well in average soil. Very good for soil erosion. Wet tolerant.

AMERICAN COMMON PERSIMMON:

A native tree 25 to 40 feet in height and 20 to 35 feet in width. Common Persimmon is slender with an oval-rounded crown, often very symmetrical, white, fragrant flowers are very sweet and a favorite of honeybees. An edible persimmon ripens with a deep orange color after several frosts. More than one tree is needed for pollination to produce fruit. Persimmon tends to sucker into groves or colonies, producing food for wildlife. The hard, heavy, close-grained wood is used for golf club heads, billiard cues, and flooring.

NORTHEAST NATIVE WILDFLOWER & GRASS MIX:

A showy mix of native grasses and wildflowers. Major species includes; sideoats grama, little bluestem, virginia wildrye, purple coneflower, blackeyed susan, oxeye sunflower, and aster. Majority of mix reaches 3-5 ft. annually. For a full species composition list contact the District.
